Chlorine-Trak™ 760S

DESCRIPTION

The Chlorine-Trak™ 760S has been specifically designed to perform as an accurate and cost-effective mass flow measurement solution for chlorine injection processes found in typical wastewater treatment applications.

Given the corrosive nature of chlorine gas (particularly in the presence of moisture), finding an economical measurement solution posed a great challenge to the industry. To answer this challenge, Sierra has designed a flow body manufactured from Kynar® polyvinylidene fluoride resin (PVDF). This material offers excellent corrosion and chemical resistance at both ambient and elevated temperatures. PVDF is also inherently stable, mechanically tough, and abrasion and flame resistant.

The 760S's flow sensor utilizes a 6" Hastelloy® C probe and 1" Swagelok® Hastelloy® NPT compression fitting to mate with the Kynar® PVDF flow body. Hastelloy C is highly resistant to pitting and crevice corrosion and is used extensively in the most corrosive environments.

With its sizable turndown (100:1) and a mass flow reading that requires no pressure or temperature compensation, Sierra's highly repeatable and stable sensor technology offers an accurate solution for chlorine flow measurement at an economical price.

Sierra's Smart Interface™ software guides you through a procedure to fully validate instrument performance and allows for field adjustment of critical flow meter settings.

PIPING REQUIREMENTS

Minimum required straight piping before the flow meter. NOTE: Unlike the the Sierra 708S, the 760S Series does not contain built-in flow conditions. Straight piping before the flow meter is therefore very important for proper operation. See table below.

Single 90° Elbow or T-Piece	28D
Reduction (4:1)	14D
Expansion (4:1)	30D
After Control Valve	32D
Two 90° Elbows (In Same Plane)	36D
Two 90° Elbows (Different Planes)	62D

Note: 5D Required after flow meter
