

The Thermal Mass Flow Meter for High Accuracy
Air, Gas, and Mixture Flow Measurement

# Thermal mass flow **accuracy** you never imagined possible.

Manufacturing and industrial process control depend on the highest accuracy air, natural gas, and gas mixture flow measurement possible to assure maximum productivity, efficiency and end-product quality.

Today, Sierra's revolutionary QuadraTherm® 640i and 780i deliver the world's most accurate thermal mass flow measurements. Accuracy is as good as, if not better, than Coriolis, at a fraction of the price. Now experience precise mass flow rate, temperature and pressure measurement from a single device.

# Dry Sensor Breakthrough

In the late 1990's, Sierra experienced its first major breakthrough with the introduction of  $DrySense^{TM}$ , a patented all-metal "dry" mass velocity sensor, which was a significant performance advantage over so-called "wet" sensors of the time. Because no organic sensor potting compounds are used, there is no sensor drift. Sierra is so confident in DrySense sensor technology, we back our DruSense sensors with a lifetime warranty.

As a result of Sierra's dry sensor breakthrough and the performance advantage experienced by thousands of companies in a wide variety of industries, Sierra is now North America's best-selling thermal mass flow meter (Flow Research, Boston, MA).

# Beyond Traditional Thermal

An even more impactful breakthrough came in 2012 with the invention of QuadraTherm flow sensor technology. Thermal performance has never been the same.

Unlike traditional twosensor thermal mass flow meters, QuadraTherm has four sensors-three precision platinum temperature sensors and one patented no-drift DrySense mass velocity sensor. For the first time, performance improvements abound as unwanted heat-transfer components are now calculated and eliminated. These components show up as false flows that degrade accuracy factors like stem conduction, sensor cross-talk. radiation, and even natural convection.

Accuracy is now twice as good as conventional thermal meters at +/-0.5% of reading. Flow range

capability has tripled from 20,000 to 60,000 sfpm (305 smps), and gas mixing and field compositional compensation is now possible.

# The Flow Engine Behind it All

At the heart of every QuadraTherm mass flow meter is advanced digital signal processing to enhance thermal mass flow metering technology and thermodynamic measurements.

Sierra's Raptor™ OS is the true "brain" of the instrument and includes a revolutionary, living, learning algorithm set made possible by today's powerful microprocessors. Raptor manages changes in gas flow, temperature and pressure, as well as outside temperature, via a comprehensive heat- transfer model in the meter firmware.

The result is a proprietary, fundamentally different gas mass flow rate calculation using all pertinent variables for the most precise, stable and accurate flow measurement possible.

Raptor interfaces with Sierra's many software apps to read and adjust in the field.

# **Notable Apps**

- ValidCal Diagnostics
- Flow Totalizer
- Meter/Signal tuning
- Dial-A-Pipe: Change pipe size
- Dial-A-Gas: Change gas type
- qMix: Make & upload gas mixtures, retain accuracy

# It Has Apps

QuadraTherm is the first thermal mass flow meter to come with comprehensive software apps for ease of use, field adjustment, and calibration validation.

Easily change pipe sizes and measured fluid in the field with apps like Dial-A-Pipe™ and Dial-A-Fluid™. (See center image)

# Field Calibration Validation

QuadraTherm features field calibration validation through its ValidCal™ Diagnostic software app. This is only possible with its DrySense no-drift velocity sensor. Costly shutdowns and annual factory recalibration charges are now eliminated.

# **Custom Gas Mixes**

Each QuadraTherm comes with Sierra's proprietary qMix gas mixing software app that empowers you to create custom gas mixtures and perform meter updating in the field with no expensive factory recalibration required.

# Flare Gas Breakthrough

QuadraTherm is the only thermal mass flow meter that maintains accuracy even when gas composition changes. The meter works with the qMix app to adjust and match real-time readings from a gas chromatograph (GC). This can be done automatically or manually. In auto mode, update frequency can be set by time or by percent change in composition.

The user can also collect flow and composition trend analysis, flow alarming, and triggers.

Sierra has many more apps under development to enhance your product experience. When released, you can immediately download and begin using them.

# SierraLoop World Class Calibration

Designed by Sierra and located at our metrology headquarters in Monterey, California, SierraLoop<sup>TM</sup> is among the world's most accurate private gas flow calibration facilities.

Rated at +/- 0.3% of reading, all calibrations follow the guidelines of ISO 17025 and are traceable to national standards such NIST (United States National Institute of Standards and Technology).

Fully automated, once flow application data is programmed, SierraLoop automation software manages all aspects of flow calibration testing. It performs high-speed time-aligned data acquisition and performance analysis over the entire flow measurement range, and generates a calibration certificate documenting instrument performance.

# Service, Commissioning & Training

The need to deliver fast, localized support to global customers has resulted in the establishment of dedicated Sierra Flow Centers on almost every continent. And they are backed up by technical experts in over 150 locations in more than 50 countries.

Sierra's team of engineers can commission your flow meter to assure optimal performance and train you to get the most out of your instrument.

We provide lifetime support for all Sierra products and will get on a plane to help you when necessary.

# Sierra's Big-3 Technologies

QuadraTherm is one of three advanced flow meter technologies Sierra has developed to help facility managers tackle tough energy management challenges.

For what we call our Big-3, Sierra has become a recognized expert in thermal mass (QuadraTherm®), vortex shedding (InnovaMass®), and transit-time ultrasonic (InnovaSonic®). Sierra is the only company in the USA to manufacture all three flow technologies.

The Big-3 are optimized to be a complete solution for flow energy measurement—facility flows that impact costs like compressed air, natural gas, steam, and hot or chilled water.

As new apps and improvements become available, all Big-3 technologies benefit and are field firmware upgradable.
