INNOVASONIC 210

DESCRIPTION

Sierra's portable InnovaSonic® 210 ultrasonic clamp-on liquid flow meter enables the user to do flow measurement checks at many points in a flow process without the need for a permanent installation.

Battery powered, lightweight, and rugged, the 210 is a totally self-contained flow measurement package. 210 comes standard with a sturdy and convenient pelican carrying case, transducers installed into compact, easy to set up mounting racks (magnetic & cable mount), coupling compound and a start-up CD. Get high accuracy measurements in five minutes or less. This universal transit-time meter features a dual-function pushbutton interface, ergonomic handheld design and a beautiful backlit color digital display that significantly simplifies setup and data collection.

The 210 is ideal for precisely measuring a wide range of liquid flows. Its high-powered ultrasonic pulse with improved digital signal processing requires just one set of transducers for a wide range of pipe sizes and materials including metal, plastic and concrete. While principally designed for clean liquids, the 210 operates effectively with the minimal quantity of air bubbles or suspended solids found in most industrial applications.

The 210 provides a powerful and extremely user-friendly programming menu that includes instantaneous flow rate, positive total, negative total, net total, velocity, date & time, and daily flow results. Its 2 GB SD memory card promises high-capacity data logging and a rechargeable lithium-ion battery supports continuous operation up to 10 hours.
