

# VorCone™ Flowmeter

## Model MVC Mass VorCone Meter

VorTek Instruments' VorCone™ flowmeters utilize two different flow meter technologies in combination; vortex and differential pressure. The design has blended the two separate flow metering principles into one hybrid system where the two meters complement each other's performance. This combination allows for the prediction of the fluid density, volumetric flow rate and mass flow rate without any fluid density information being required from an external source.

This ability to measure fluid density allows the meter to provide several valuable outputs. The VorCone meter can calculate the density of changing gas mixtures. For example, natural gas is typically a composition of many different gases which can vary over time and vary by application. In saturated steam service, the meter produces a reliable steam quality (dryness) measurement, and steam mass flow rate reading. In wet natural gas service, the meter is able to provide a reliable liquid loading measurement, and gas mass flow rate reading. These are a few examples of the unique capabilities of the VorCone meter.

With the addition of two differential pressure transmitters, advanced diagnostic software (DP Health Check™) continually monitors and verifies the meter's performance. The VorCone product line is available with a wide range of options and meter configurations to meet your specific application requirements.

### VorCone™ Advantage:

#### Single phase service

- Measures fluid density, volumetric flow rate and mass flow rate without any density information being required from an external source
- Able to calculate the density of changing gas mixtures. For example, natural gas is typically a composition of many different gases which can vary over time and vary by application
- With a VTP model, VorCone is able to compare calculated density against predicted density to ensure the accuracy of the density measurement
- Energy Monitoring. Ability to compute and output energy consumption with select fluids. Steam, water, and heat transfer fluids
- Advanced diagnostic software (DP Health Check™), is able to continually monitor and verify the meter's cone element health and confirm output uncertainty

#### Saturated steam service

- Provides a total mass flow measurement of steam and water mixture
- Provides a reliable steam quality (dryness) measurement
- More cost effective than current steam quality (dryness) meters
- A combination of the two most proven technologies for steam metering; vortex and differential pressure cone metering
- Energy Monitoring. Ability to accurately compute and output energy consumption based on steam quality (dryness)
- With on board data logging, you can track and trend steam quality (dryness)

#### Wet gas service

- Provides a reliable liquid loading measurement
- Knowing the liquid loading, the VorCone meter provides an accurate corrected gas flow measurement
- With on board data logging, you can track and trend liquid loading

## VorCone Principle of Operation

With a single phase flow, a vortex meter measures the actual volumetric flow rate (Q). The vortex meter reads the vortex shedding frequency off the bluff body (f) and relates it via the meter factor (K) to the volume flowrate (Q), see equation 1. This volumetric flow rate measurement is density ( $\rho$ ) insensitive.

$$(1) \quad Q = \frac{f}{K}$$

With a single phase flow, a differential pressure (DP) flow meter measures the volumetric flowrate once the density is supplied from an external source. The DP meter volume flowrate calculation is density ( $\rho$ ) sensitive. Equation 2 shows the cone DP meter volumetric flow equation, where E and A<sub>t</sub> are fixed geometry terms, C<sub>d</sub> is the discharge coefficient, and  $\Delta P_t$  is the cone meter DP primary signal.

$$(2) \quad Q = EA_t C_d \sqrt{\frac{2\Delta P_t}{\rho}}$$

As described by Boden in 1956, if a density sensitive meter (cone DP meter) is cross referenced with a density insensitive meter (vortex meter) the density can be derived internally by the system, i.e. see equation 3.

$$(3) \quad \rho = (2\Delta P) \left( \frac{K_v EA_t \epsilon C_d}{f} \right)^2$$

The VorCone mass flowrate calculation is now calculated via equation 4, where the vortex meter volumetric flow prediction (Q) and this internal density prediction ( $\rho$ ) are used. No external density measurement is required.

$$(4) \quad m = \rho Q$$

*For illustrative purposes only.  
Not representative of a correct installation orientation.*

## Suggested Configurations Per Application

### Single phase service

- Able to measure fluid density, volumetric flow rate and mass flow rate without any density information being required from an external source.
- Able to calculate the density of changing gas mixtures.

**MINIMUM MEASUREMENT VARIABLES REQUIRED: VELOCITY**

\*Models with velocity, temperature, and pressure variables can compare predicted and calculated density to ensure density accuracy.

#### All acceptable configurations (Feature 1: Configuration Options)

- V -Velocity sensor
- VT -Velocity and Temperature Sensors
- VTP - Velocity, Temperature and Pressure Sensors\*
- VTEP - Velocity, Temperature and External 4-20mA Input (T or P)\*

- VETEP - Velocity, External RTD Temperature Input, External 4-20mA Input\*
- VT-EM - Energy output options
- VTP-EM - Energy options with Pressure Sensor\*
- VTEP-EM - Velocity, Temperature and External 4-20mA Input\*
- VETEP-EM - Velocity, External RTD Temperature Input, External 4-20mA Input\*

### Saturated steam service

- Provides a reliable steam quality (dryness) measurement, and steam total mass flow rate reading (steam & water mixture).

**MINIMUM MEASUREMENT VARIABLES REQUIRED: VELOCITY AND TEMPERATURE**

#### All acceptable configurations (Feature 1: Configuration Options)

- VT -Velocity and Temperature Sensors
- VTP -Velocity, Temperature and Pressure Sensors
- VTEP -Velocity, Temperature and External 4-20mA Input (T or P)
- VETEP -Velocity, External RTD Temperature Input, External 4-20mA Input (T or P)
- VT-EM -Energy output options
- VTP-EM -Energy options with Pressure Sensor
- VTEP-EM -Velocity, Temperature and External 4-20mA Input (T or P)
- VETEP-EM -Velocity, External RTD Temperature Input, External 4-20mA Input (T or P)

### Wet gas service

- Provides a reliable liquid loading measurement, and gas mass flow rate reading.

**MINIMUM MEASUREMENT VARIABLES REQUIRED: VELOCITY, TEMPERATURE AND PRESSURE**

#### All acceptable configurations (Feature 1: Configuration Options)

- VTP -Velocity, Temperature and Pressure Sensors
- VTEP -Velocity, Temperature and External 4-20mA Input (T or P)
- VETEP -Velocity, External RTD Temperature Input, External 4-20mA Input (T or P)
- VTP-EM -Energy options with Pressure Sensor
- VTEP-EM -Velocity, Temperature and External 4-20mA Input (T or P)
- VETEP-EM -Velocity, External RTD Temperature Input, External 4-20mA Input (T or P)

### Onboard data logging

#### All acceptable configurations (Feature 7: Input power)

- DCHPOE -12-28 VDC or Power over Ethernet, 5 Watts maximum, required on 1AMIP, 1ABIP, 3AMIP, 3ABIP

#### All acceptable configurations (Feature 8: Output)

- 1AMIP -One analog output (4-20 mA), one alarm, one pulse, MODBUS TCP/IP Communication Protocol, DCHPOE ONLY
- 1ABIP -One analog output (4-20 mA), one alarm, one pulse, BACnet/IP Communication Protocol, DCHPOE ONLY
- 3AMIP -Three analog outputs (4-20 mA), three alarms, one pulse, MODBUS TCP/IP (VT, VTP only), DCHPOE ONLY
- 3ABIP -Three analog outputs (4-20 mA), three alarms, one pulse, BACnet/IP (VT, VTP only), DCHPOE ONLY

## Performance Specifications

### Accuracy

Multiparameter VorCone Meter			
Process Variables	Liquids	Dry Gas/ Superheated Steam	Wet Gas/ Saturated Steam
Volumetric Flow Rate	± .7% of Rate	± 1% of Rate	± 3% of Rate
Mass Flow Rate	± 1% of Rate	± 1% of Rate	± 3% of Rate
Temperature	± 2°F (± 1°C)	± 2°F (± 1°C)	± 2°F (± 1°C)
Pressure	± .3% of Full Scale	± .3% of Full Scale	± .3% of Full Scale
Calculated Density**	± .3% of Reading	± .5% of Reading	N/A
Predicted Density***	± .75% of Reading	± 1.5% of Reading	± 4% of Reading*
Saturated Steam/Wet Gas Quality	N/A	N/A	± 2% of Full Scale*

\* Depending on percentage of liquid content & velocity. For wet gas, Lockhart Martinelli parameter less than 0.15 (XLM < 0.15) is recommended. For saturated steam, steam dryness fraction between 0.4 to 1.00 is recommended. Measurement uncertainty can increase if used outside of these recommendations.

\*\* Calculated density is derived from equations of state and a known fluid temperature & pressure.

\*\*\* Predicted density is a function inherent to the combined technologies of vortex and differential pressure flow metering. It denotes the VorCone meter density output.

The Lockhart–Martinelli parameter expresses the liquid fraction of a flowing fluid.

### Repeatability

Mass Flow Rate . . . . . ± .2% of rate  
 Volumetric Flow Rate . . . . . ± .1% of rate  
 Temperature . . . . . ± 2°F (± 1°C)  
 Pressure . . . . . ± .05% of full scale  
 Calculated Density . . . . . ± .1% of reading

### Stability Over 12 Months

Mass Flow Rate . . . . . ± .2% of rate  
 Volumetric Flow Rate . . . . . ± negligible  
 Temperature . . . . . ± .9°F (± .5°C)  
 Pressure . . . . . ± .1% of full scale  
 Calculated Density . . . . . ± .1% of reading

### Response Time

Adjustable from 1 to 100 seconds

## Operating Specifications

Any gas, liquid or steam compatible with 316L stainless steel, C276 hastelloy or A105 carbon steel.

### Process and Ambient Temperature

Process Standard Temperature (code ST): -330 to 500°F (-200 to 260°C)

Process High Temperature (code HT): to 750°F (400°C)

Ambient Operating: -40 to 140°F (-40 to 60°C)

Ambient Storage: -40 to 185°F (-40 to 85°C)

Pressure Transducer Ratings			
Full Scale Operating Pressure		Max. Over-Range Pressure	
psia	bara	psia	bara
30	2	60	4
100	7	200	14
300	20	300	40
500	35	1000	70
1500	100	2750	175

### Power Requirements

DCL option: 12-36 VDC, 25mA, 1W max, loop powered (single output)

DCH option: 12-36 VDC, 300mA, 9W max, (multiple outputs)

AC option: 100-240 VAC, 50/60Hz line power, 5W (multiple outputs)

DCHPOE option: 12-28 VDC or Power over Ethernet, 5W maximum (multiple outputs)

### Display

Alphanumeric 2 line x 16 character LCD digital display

Six pushbuttons for full field configuration

Pushbuttons can be operated with magnetic wand without removal of enclosure covers

Display can be mounted in 90° intervals for better viewing

### Output Signals

Analog: 4-20 mA

Alarm: Solid state relay, 40 VDC

Totalizer Pulse: 50 millisecond pulse, 40 VDC

Volumetric or Loop Powered Mass: One analog, one totalizer pulse, HART

Multivariable option: Up to three analog signals, three alarms, one totalizer pulse, HART

Multivariable option: Modbus, Ethernet, or BACnet process monitoring

## Physical Specifications

### Wetted Materials

Standard 316L Stainless Steel, plus

- Optional Carbon Steel or Hastelloy C

- DuPont Teflon® based thread sealant on models with pressure transducer

### Approvals—Pending

FM, FMC CLASS I, DIV. 1, GROUPS B,C,D

CLASS II/III, DIV. 1, GROUPS E,F,G

Type 4X and IP66, T6, Ta = -40 to 60°C

ATEX II 2 G Ex d IIB + H2 T6

II 2 D EX tD A21 IP66 T85°C, Ta = -40 to 60°C

IECEx Ex d IIB + H2 T6

Ex tD A21 IP66 T85°C, Ta = -40 to 60°C

## Sizing Considerations

Condition	Piping Conditions	
	Pipe Diameters, D	
	Upstream	Downstream
One 90° elbow before meter	10D	5D
Two 90° elbows before meter	15D	5D
Two 90° elbows before meter, out of plane	30D	10D
Reduction before meter	10D	5D
Expansion before meter	20D	5D
Partially open valve	30D	10D

### Velocity Range

Maximum velocity, liquid: 30 feet/sec (9 meters/second)  
 Minimum velocity, liquid: 1 foot/sec (.3 meters/second)  
 Maximum velocity, gas or steam: See Table Below  
 Minimum velocity, gas or steam feet/sec (meters/second):

$$\frac{5}{\sqrt{\text{density (Lb/ft}^3)}} \quad \frac{6.1}{\sqrt{\text{density (kg/m}^3)}}$$

### Pressure Drop Equations

$\Delta P = 0.00044 \rho V^2$  English Units ( $\Delta P$  in psi,  $\rho$  in  $\text{lb/ft}^3$ ,  $V$  in ft/sec)  
 $\Delta P = 0.00002 \rho V^2$  Metric Units ( $\Delta P$  in bar,  $\rho$  in  $\text{kg/m}^3$ ,  $V$  in m/sec)

Consult the VorTek Instruments Sizing Program @vortekinst.com for easy calculation of flow range.

Water Minimum and Maximum Flow Rates							
Rate	Nominal Pipe Size (in)

## Advanced Diagnostics

### VorCone Meter DP Cone Meter Advanced Diagnostics—DP Health Check™

DP Health Check is a comprehensive verification system for Differential Pressure (DP) meters. The VorCone meter's cone DP meter sub-system can operate with DP Health Check. Utilizing a third pressure port downstream of the cone and reading three DPs, DP Health Check analyses not just the traditional single DP reading, but the entire pressure field. The additional information expands the capability of the cone meter, offering a full diagnostic suite. DP Health Check creates a smart cone meter allowing for condition based maintenance operations.

Fig 1. DP Health Check™ Ready Cone DP Meter and Associated Pressure Field

DP Health Check creates seven diagnostic checks, i.e. one DP integrity check, three separate inter-comparable flowrate predictions, and three DP ratios comparable with the baselines. The HMI (human-machine interface) is designed for simplicity: the seven diagnostics are plotted as four points on a graph with a 1x1 box. All points inside the box shows the meter is functioning normally (see Fig 2). Any points outside the box shows a potential metering issue. Figs. 3 and 4 show response to varying saturated steam quality and single phase DPt reading error respectively. Pattern recognition technology allows the source of the problem to be directly identified

Fig 2. Display for Correctly Operating Meter

### Feature 7: Input Power

<b>DCL</b>	12-36 VDC, 25mA, 1W max. required on loop powered meters (Unable to power differential pressure transmitter with this option), 1AHL only
<b>DCH</b>	12-36 VDC, 300mA, 9W max. (Able to power differential pressure transmitter if wired in series with an adequate power supply) - use with 1AH, 1AM, 3AH, 3AM
<b>DCHPOE</b>	12-28 VDC or Power over Ethernet, 5 Watts maximum, required on 1AMIP, 1ABIP, 3AMIP, 3ABIP
<b>AC</b>	100-240 VAC, 50/60 Hz line power, 5W max. (Able to power differential pressure transmitter with DC power output) - use with 1AH, 1AM, 3AH, 3AM

### Feature 8: Output

<b>1AHL</b>	Loop powered option - one analog output (4-20 mA), one scaled frequency, one pulse, HART, DCL input power only
<b>1AH</b>	One analog output (4-20 mA), one alarm, one pulse, HART Communication Protocol, DCH or AC option only *
<b>1AM</b>	One analog output (4-20 mA), one alarm, one pulse, MODBUS RTU Communication Protocol, DCH or AC option only *
<b>1AMIP</b>	One analog output (4-20 mA), one alarm, one pulse, MODBUS TCP/IP Communication Protocol, DCHPOE ONLY*
<b>1AB</b>	One analog output (4-20 mA), one alarm, one pulse, BACnet MS/TP Communication Protocol, DCH or AC option only *
<b>1ABIP</b>	One analog output (4-20 mA), one alarm, one pulse, BACnet/IP Communication Protocol, DCHPOE ONLY*
<b>3AH</b>	Three analog outputs (4-20 mA), three alarms, one pulse, HART (VT,VTP only), DCH or AC option only *
<b>3AM</b>	Three analog outputs (4-20 mA), three alarms, one pulse, MODBUS RTU (VT,VTP only), DCH or AC option only *
<b>3AMIP</b>	Three analog outputs (4-20 mA), three alarms, one pulse, MODBUS TCP/IP (VT,VTP only), DCHPOE ONLY*
<b>3AB</b>	Three analog outputs (4-20 mA), three alarms, one pulse, BACnet MS/TP (VT,VTP only), DCH or AC option only *
<b>3ABIP</b>	Three analog outputs (4-20 mA), three alarms, one pulse, BACnet/IP (VT,VTP only), DCHPOE ONLY*

\*Includes scaled frequency output

### Feature 9: Temperature Options

<b>ST</b>	Standard temperature. Process temperature -330° to 500°F (-200° to 260°C)
<b>HT</b>	High temperature. Process temperature 750°F (400°C)

### Feature 10: Pressure Options

<b>P0</b>	No Pressure Sensor
<b>P1</b>	Maximum 30 psia (2 bara), Proof 60 psia (4 bara)
<b>P2</b>	Maximum 100 psia (7 bara), Proof 200 psia (14 bara)
<b>P3</b>	Maximum 300 psia (20 bara), Proof 600 psia (41 bara)
<b>P4</b>	Maximum 500 psia (34 bara), Proof 1000 psia (64 bara)
<b>P5</b>	Maximum 1500 psia (100 bara), Proof 2500 psia (175 bara)

### Feature 11: Differential Pressure Transmitter

<b>AZ</b>	Factory supplied Azbil differential pressure transmitter
<b>CX</b>	Customer supplied differential pressure transmitter*

\*Customer supplied differential pressure transmitter output must be scaled to factory specifications

### Feature 12: Differential Pressure Transmitter Manifold

<b>3M</b>	3-way SST manifold. Ability to equalize high/low side pressures to set the differential pressure transmitter zero
<b>5M</b>	5-way SST manifold. Ability to equalize high/low side pressures to set the differential pressure transmitter zero and the ability to check for equalizing valve leaks
<b>NM</b>	No manifold

### Feature 13: Advanced Diagnostics (DP Health Check) - Additional Differential Pressure Transmitters

-Advanced Diagnostics (DP Health Check) requires two additional differential pressure transmitters and an additional pressure tap

<b>2AZ</b>	Two additional factory supplied Azbil differential pressure transmitters
<b>2CX</b>	Customer supplied two additional differential pressure transmitters
<b>ND</b>	No Advanced Diagnostics (DP Health Check)

### Feature 14: Advanced Diagnostics (DP Health Check) - Additional Pressure Tap

-Advanced Diagnostics (DP Health Check) requires two additional differential pressure transmitters and an additional pressure tap

<b>FT</b>	Factory supplied additional pressure tap (Sizes 2" - 4" only. Spool piece with pressure tap required above 4")*
<b>CT</b>	Customer supplied additional pressure tap
<b>ND</b>	No Advanced Diagnostics (DP Health Check)

\*Spool piece with pressure tap can be factory supplied or customer supplied to factory specifications. Contact factory if required.

### Feature 15: Cone Meter Beta Ratio

-Beta Ratio is determined through flow sizing. Please visit [www.vortekinst.com](http://www.vortekinst.com) for flow sizing guide.
